

INTRODUCING THE
ALL NEW
INDOOR
VOLLEYBALL
MVA200

REID PRIDDY
US NATIONAL TEAM

THIS BALL
CHANGES IT ALL!

- Official ball of the 2008 Beijing Games
 - New 8 Panel swirl design – The elimination of some panel seams allows for more contact area on the surface of the ball improving passing and control.
- Dimpled microfiber material – The dimples create turbulence in the air. This lack of resistance allows the ball to fly truer through the air.
 - Cemented panel seams – Cementing only the seams of the ball allows air in between the cover and carcass. This gives the ball a softer feel without losing any of its explosiveness.
- Blue and Yellow color - The human eye picks up these two colors fastest allowing for better reactions and hopefully more touches.
